

Hospital Grade GYM MAT Disinfection

Gym mats can harbor many contaminants such as MRSA, ringworm and staph. Cross contamination is at its highest when mats are shared for activities such as wrestling and gym class. Typical chemical disinfectants can damage mats, cause health concerns for the athletes and not eliminate these high strains of bacteria and fungus.

BactroKill is the most effective broad spectrum cleaner and disinfectant with many features and benefits for your school or gym!

- Hospital Grade
- EPA registered
- Bactericidal
